TETRIS IN PYTHON

電機一甲 11128105 陳芊妤 11128127 楊尋真 11128146 蔡依琪 11128153 陳靖涵

Tetris in python page 1.

使用說明

• 專案目的

透過程式碼的修改,學習使用Pygame函式庫,進而 學習遊戲開發的基礎,並增加對Python的認識

- 玩法、功能
- 1.使用鍵盤的上下左右鍵移動、旋轉方塊
- 2.消除方塊得取分數
- 3.分數越高, 方塊下降速度提高
- 4.超出上方邊界,遊戲結束

Tetris in python page 2.

重點程式碼

1.俄羅斯方塊掉落速度

```
if score >= 150 and a == 2:
    fall_speed -= 0.05
   a = a + 1
elif score >= 100 and a == 1 :
    fall_speed -= 0.05
   a = a + 1
elif score >= 50 and a == 0:
    fall_speed -= 0.05
   a = a + 1
```

Tetris in python page 3.

重點程式碼

2.上下左右鍵控制

```
if event.type == pygame.KEYDOWN:
   if event.key == pygame.K_LEFT:
        current_piece.x -= 1
       if not(valid_space(current_piece, grid)):
            current_piece.x += 1
   if event.key == pygame.K_RIGHT:
        current_piece.x += 1
       if not(valid_space(current_piece, grid)):
            current_piece.x -= 1
   if event.key == pygame.K_DOWN:
        current_piece.y += 1
       if not(valid_space(current_piece, grid)):
            current_piece.y -= 1
   if event.key == pygame.K_UP:
        current_piece.rotation += 1
       if not(valid_space(current_piece, grid)):
            current_piece.rotation -= 1
   if event.key == pygame.K_SPACE:
        while (valid_space(current_piece, grid)):
            current_piece.y += 1
            # if not (valid_space(current_piece, grid)):
        current_piece.y -= 1
```

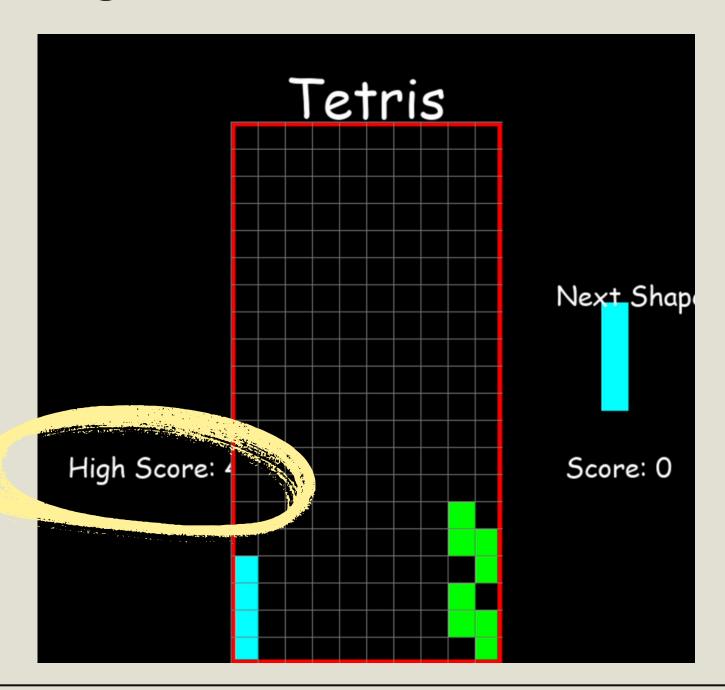

Tetris in python page 4.

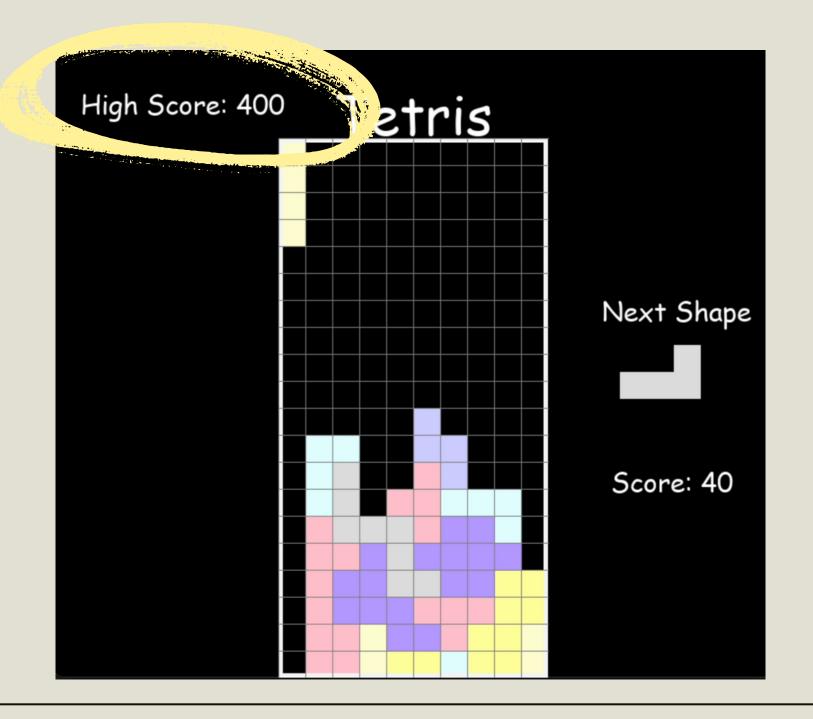

1. 空白鍵: 下降到最底

```
if event.key == pygame.K_SPACE:
    while (valid_space(current_piece, grid)):
        current_piece.y += 1
        # if not (valid_space(current_piece, grid)):
        current_piece.y -= 1
```

Tetris in python page 5.

2. 把 high score往上移(原本被擋到)

Tetris in python page 6.

```
label = font.render('High Score: ' + last_score, 1, (255,255,255))

sx = top_left_x - 200

sy = top_left_y + 200

surface.blit(label, (sx + 20, sy + 160))
```

```
label = font.render('High Score: ' + last_score, 1, (255,255,255))

sx = top_left_x - 200
sy = top_left_y + 200

surface.blit(label, (sx - 20, sy - 260))
```

Tetris in python page 7.

3. 下降速度分段(速度加快)

```
while run:
    grid = create_grid(locked_positions)
    fall_time += clock.get_rawtime()
    level_time += clock.get_rawtime()
    clock.tick()

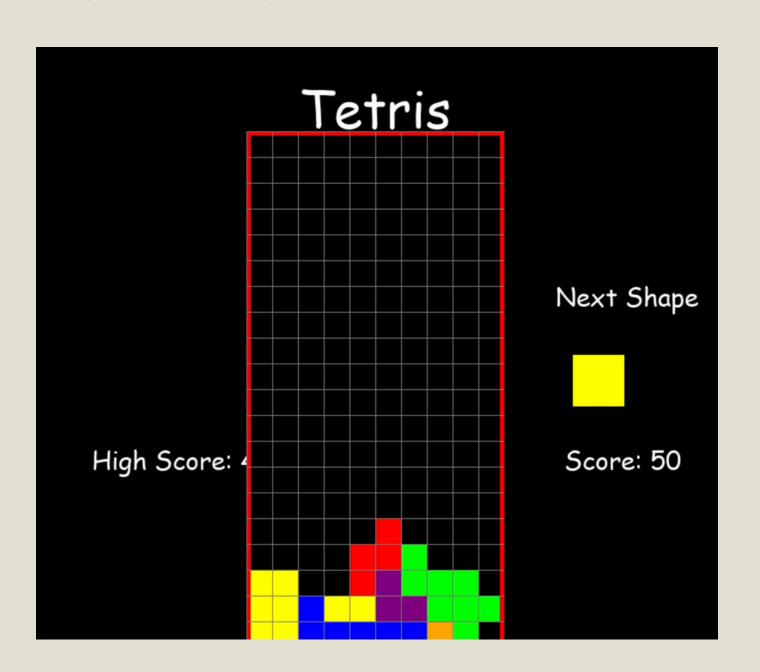

if level_time/1000 > 5:
    level_time = 0
    if level_time > 0.12:
        level_time -= 0.005
```

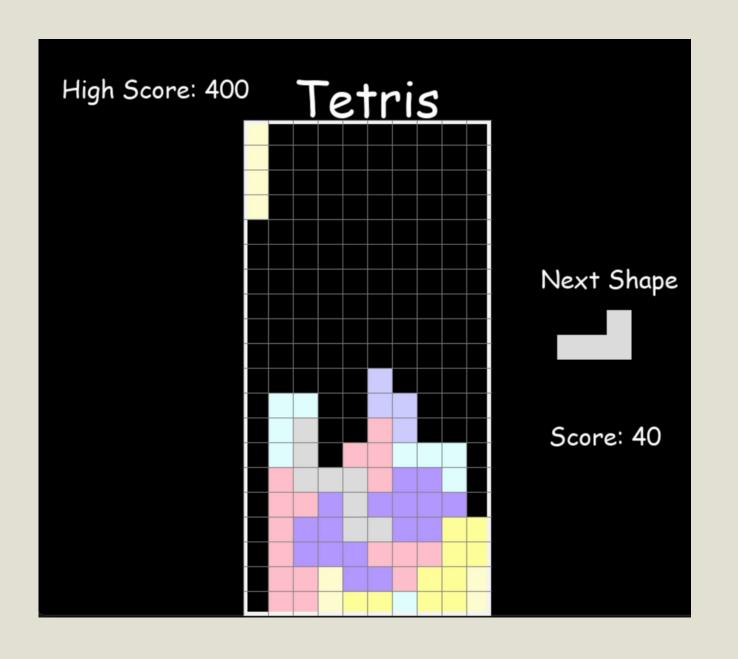

```
if score >= 150 and a == 2:
    fall_speed -= 0.05
    a = _ a + 1
elif score >= 100 and a == 1_:
    fall_speed -= 0.05
    a = a + 1
elif score >= 50 and a == 0:
    fall_speed -= 0.05
    a = a + 1
```

Tetris in python page 8.

4. 更改方塊顏色

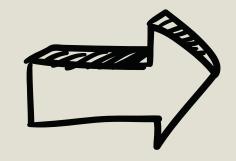

Tetris in python page 9.

Before

```
\#shape_colors = [(0, 255, 0),
                  (255, 0, 0),
#
                  (0, 255, 255),
                  (255, 255, 0),
                  (255, 165, 0),
                  (0, 0, 255),
                  (128, 0, 128)
```

```
After
```

```
shape_colors = [(204, 204, 255),
                (179, 153, 255),
                (255, 253, 208),
                (255, 255, 153),
                (224, 255, 255),
                (220, 220, 220),
                (255, 192, 203)]
```

Tetris in python page 10.

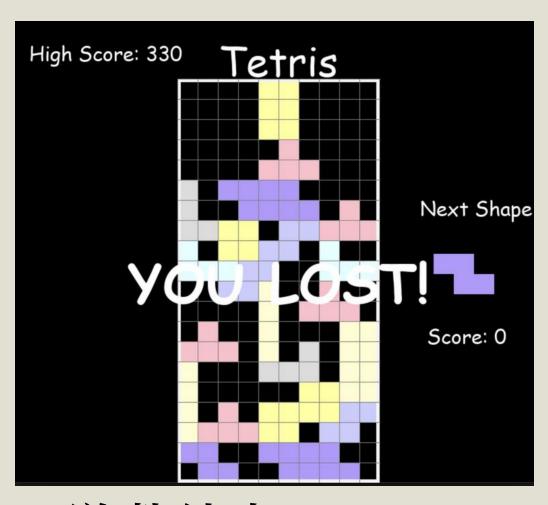

• 遊戲開始

2.遊戲進行

3.遊戲結束

陳芊妤

看現成的程式碼雖然容易理解,但要我們直接寫出來是 還是有一點難度的;然而透過修改程式碼,能夠學到 Pygame的使用與一些寫程式的技巧,因此模仿也能夠 使我們進步。

楊尋真

在網路上尋找Python專題時,看到了Tetris相關主題特別 感興趣,多方參考網路現成程式碼後放入Pycharm執行, 然而,畫面呈現與功能尚有不足之處,透過資料查詢與請 教有經驗人士使成果更完善,過程也學到了許多。

蔡依琪

透過進行Python Tetris相關的專題,讓我對Pygame有初步 的認識,並且藉由參考網路現有資料了解基本功能程式碼 ,接著進一步做改善及修改,過程中遇到問題利用chat gpt工具並與組員討論才完成結果,收穫良多。

陳靖涵

藉由這次的Tetris in python專題,我初次接觸了PyGame 這個函式庫,並對簡易2D遊戲的程式的開發有了新的 了解,學習到了許多新的事物。
